

HR Attrition Analytics Dashboard Report

This project focuses on analyzing employee attrition patterns using SQL and Power BI. The objective of the project is to identify major factors contributing to employee attrition and provide meaningful business insights through interactive dashboards and analytical visualizations.

Project Objectives Analyze employee attrition trends. Identify departments and job roles with high attrition. Study the impact of salary, overtime, satisfaction, and promotions on attrition. Create an interactive dashboard for HR decision-making. Provide business insights for employee retention strategies.

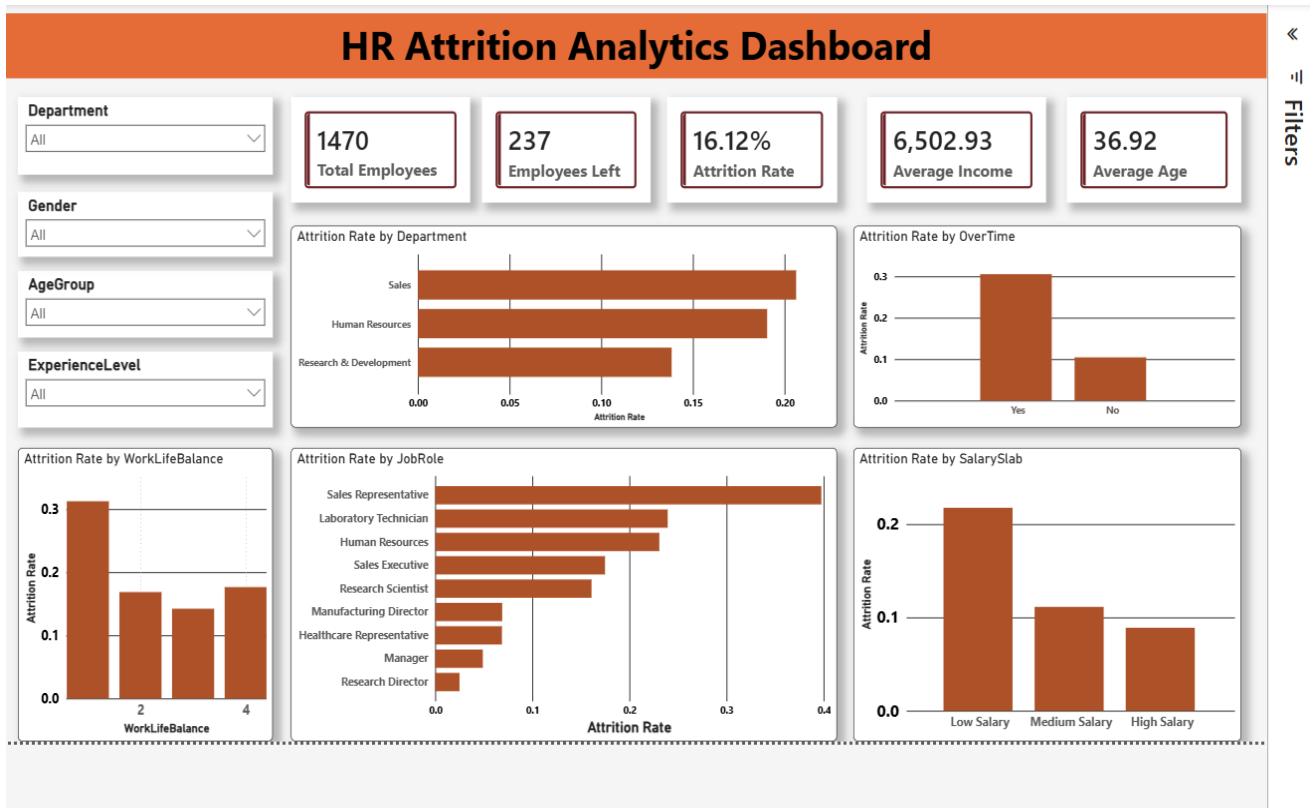

Tools & Technologies Used MySQL – Data analysis and querying Power BI – Dashboard creation and data visualization DAX – KPI measures and calculations Excel/CSV Dataset – IBM HR Analytics Dataset

SQL Analysis Performed Overall Attrition Rate Department-wise Attrition Analysis Job Role-wise Attrition Analysis Salary Slab vs Attrition Overtime vs Attrition Work-Life Balance Analysis Experience Level Analysis Business Travel Analysis Tenure and Promotion Analysis

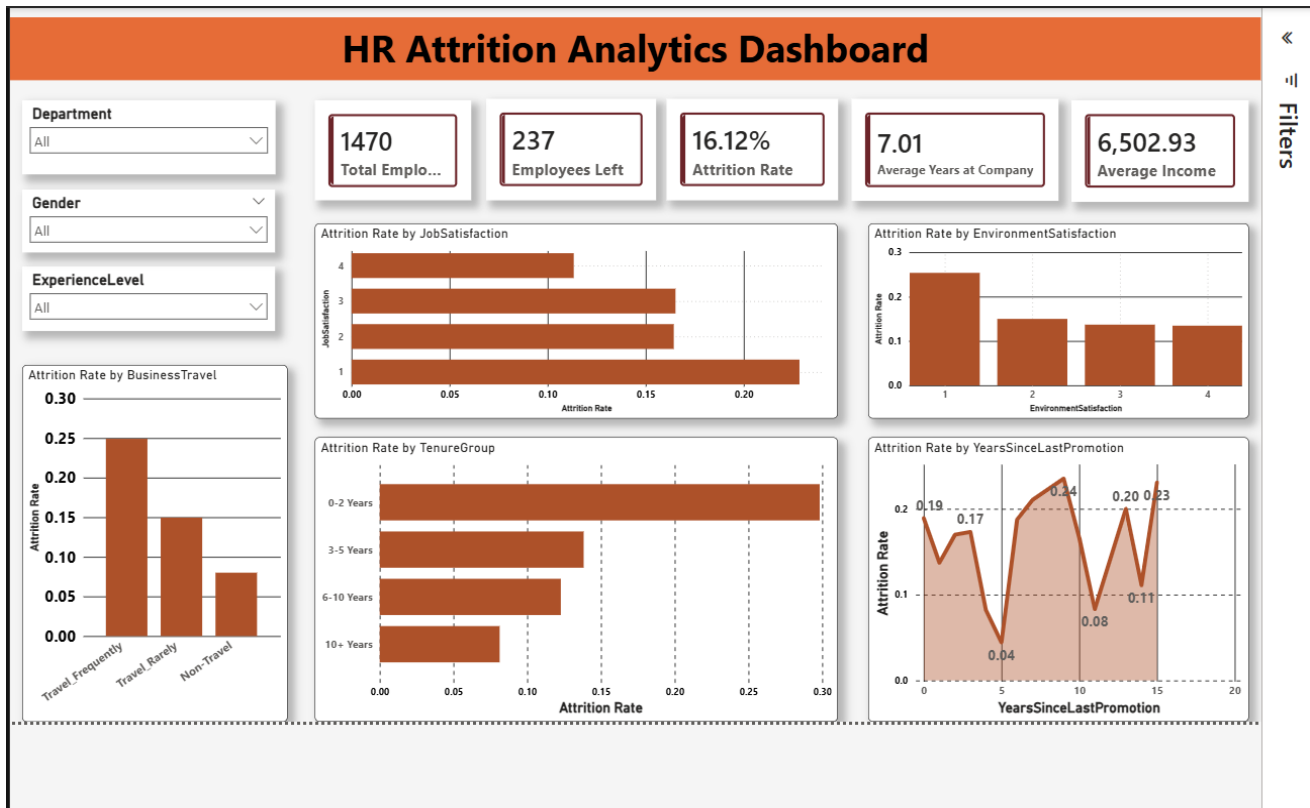

Dashboard Features Interactive slicers for Department, Gender, Age Group, and Experience Level KPI cards for Total Employees, Employees Left, Attrition Rate, Average Income, and Average Years at Company Multi-page dashboard design Behavioral and root-cause attrition analysis Dynamic filtering and visual storytelling

Key Business Insights Sales department showed the highest attrition rate. Sales Representatives and Laboratory Technicians experienced high employee turnover. Employees working overtime had significantly higher attrition. Low salary slabs showed higher attrition rates. Lower job satisfaction and environment satisfaction were strongly associated with attrition. Employees with fewer years at the company had higher chances of leaving. Frequent business travel contributed to increased attrition.
